Resorbable Gentamicin Collagen Haemostat

**Composition:** Renatured bovine collagen, gentamicin sulphate. Collatamp G contains, per cm²: 2.8 mg collagen, 2.0 mg gentamicin sulphate (equivalent to 1.3 mg gentamicin base).

**Description:** Collatamp G is a fully resorbable gentamicin-collagen haemostat, used as a surgical implant for haemostasis and local delivery of high doses of gentamicin. Collatamp G is fully resorbed within 2-14 days, depending on perfusion of the implant site, negating the need for an additional removal procedure. Collatamp G is available in 3 sizes for convenience and can be cut to size to fit the area to be treated. Generally, up to 3 Collatamp G (10 cm x 10 cm) can be used.

**Safety:** Used in 2 Million patients over 20 years globally, no side effects have been reported to date. If the recommended maximum dose is exceeded, gentamicin-specific side effects cannot be ruled out completely, especially in the case of renal failure.

**Indication:** Collatamp G is used for local haemostasis of capillary, parenchymatous and seeping haemorrhages in areas with a high risk of infection. This product contains gentamicin sulphate at a locally effective dose. Systemically effective therapeutic blood or plasma levels are not generally achieved.

**Contraindications:** Collatamp G should not be used if a protein allergy is known or intolerability towards gentamicin has been observed. No experience has been gained in use during pregnancy and breast-feeding. For this reason, the indication should be strictly established during pregnancy and breast-feeding. The indication for Collatamp G should also be strictly established in patients with impaired renal function.
